How long have you been using an EMR? * 11 years

Who is your target audience? * New EMR Users
Intermediate EMR Users
Advanced EMR Users

Abstract Title: * Lung Cancer: prevention, screening and care of patients with lung cancer

Learning Objectives: * 1 Learners will be able to Identify risk factors for lung cancer, and to document these in the EMR

2 Learners will be able to identify patients in their practice eligible for high risk lung cancer screening and tobacco cessation programs

3 Learners will know how to implement early access to palliative care for patients with lung cancer and to use EMR tools for comprehensive palliative care

Abstract: *

Lung cancer is the most commonly diagnosed cancer and is the leading cause of cancer deaths. Interventions to reduce tobacco use should lessen the lung cancer disease burden as tobacco use contributes to 85% of lung cancers.

EMR tools can assist physicians and other clinicians to identify patients at risk for lung cancer. These tools can assist with interventions for smoking cessation, and risk reduction at home and at work. High risk lung cancer screening is a program to identify cancer earlier in the hope of lessening death and morbidity.

Patients with lung cancer are often diagnosed at late stages of the disease and early palliative care can improve their quality of care. EMR tools for palliative care guide clinicians to provide comprehensive high quality palliative care.
