

Preventive Care Bonus Breast Cancer Screening

i4C Indicator RPT-BNS-001: Preventive Care Bonus Breast Cancer Screening v 2.1

Category: Reporting/Care Bonus

Purpose:

This indicator is used to review the percentage of patients meeting the criteria for the preventive care bonus.

Source:

Not derived from any primary care reporting framework; introduced during the EMR Physician Dashboard Proof of Concept to support clinicians tracking eligibility for submitting cumulative preventive care bonus codes.

Base Population:

All enrolled female patients who are between ages 50 and 74, inclusive, as of March 31 of the fiscal year for which the bonus is being claimed and who are not excluded from screening.

Indicator Segments:

Screening up to date: Count of enrolled female patients age 50-74 at fiscal year-end WITHOUT a mammogram exclusion documented AND WITH a mammogram screening documented within 30 months prior to fiscal year-end.

Screening overdue: Count of enrolled female patients age 50-74 at fiscal year-end WITHOUT a mammogram exclusion documented AND WITHOUT a mammogram screening documented within 30 months prior to fiscal year-end.

Mammogram Screening can be documented as a Q131A tracking code that has been submitted for a patient, a report from a sending facility identifying that a mammogram has been done, or as a procedure documented within Past Medical/Surgical history in the cumulative patient profile.

Mammogram Exclusion can be documented as a Q141A service code that has been submitted for a patient, any of the following diagnosis codes entered in the current or past diagnosis/problem sections of the cumulative patient profile:

- V45.71: Acquired absence of breast and nipple (ICD-9)
- 174: Malignant neoplasm of female breast (ICD-9)

OR as any of the following text documented as a current/past diagnosis or as a procedure within past medical/surgical history in the cumulative patient profile:

- 'mastectomy'
- 'cancer breast'
- 'breast ca'
- 'ca breast'

Suggested Indicator Use:

Physician or practice use of this indicator is to determine the preventive care bonus for which the physician is eligible to claim. This indicator should not be used for patient care or to identify patients overdue for screening.
